

# KD RIG

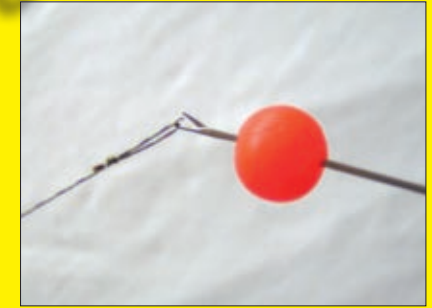

1. This is what we need

2. First we cut a piece of Immix hooklink

3. We tie a little hair loop

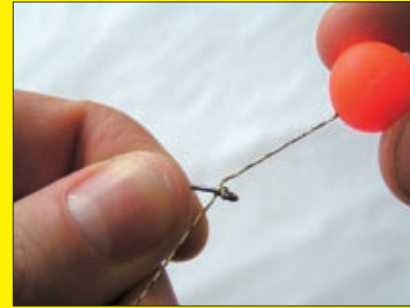

4. Put a high buoyancy pop-up on the hair

5. Then we put the rig braid through the eye of the hook, making sure the pop-up is on the right side of the hook

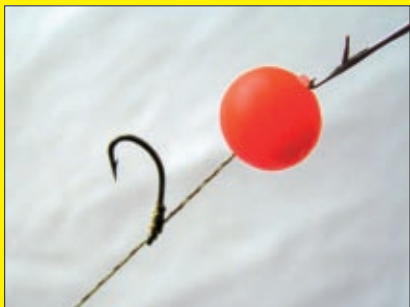

6. We make a knotless knot by pulling the pop-up and hair straight down the hook shank and wind the other end of the rig 3 times around the shank and the hair. The right length of the hair is when the pop-up is touching the middle of the bend of the hook when the hair is pulled straight down the hook shank.

7. Then pull the pop-up and the hair in the opposite direction of the bend of the hook

8. Then wind the rig around the shank of the hook 4 times more without winding over the hair

9. Finish the knotless knot by going back through the eye of the hook and pull the knot tight. Now you see the superb almost 90 degrees position of the hook

10. The secret is that the hair is coming out of the knot in the middle, so that the pop-up pulls up the hookshank slightly

11. Put a heavy leadshot on the hair, just below the pop-up. The pop-up should be critically balanced and the hook should be the weight that keeps the pop-up down.

12. To finish the rig, tie a standard swivel on the mainline side of the rig
