

COMBI POP-UP RIG

1. Most important components for this rig are IncogniX hooklink, shrink tube, rig tube and tungsten paste

2. Cut a piece of IncogniX that is sufficient for this rig (about 30 cm)

3. Then strip a piece of braid free from the outer coating

4. Tie a little hair loop on the stripped side and rig a pop-up on the hair

5. Slide a small piece of rig tube on the rig link and slide it over the point of the hook towards shown position

6. Tie a knotless knot to fix the hook and make sure that the main rig line comes out of the eye of the hook on the side of the point

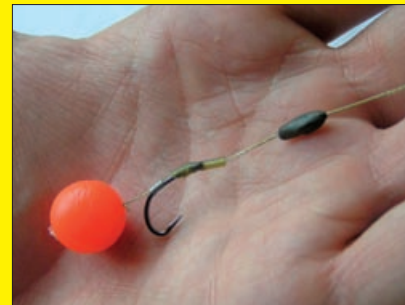

7. Slide a piece of shrink tube over the hookshank and bend it in a nice line aligner shape with steam

8. Place a piece of tungsten paste on the rig at the point where you want it to stay at the bottom

9. Now finish the rig by tying a swivel on the end with a grinner knot

10. The perfect weapon for hard to catch carp
